M7 M8 M9 - Stools

easy, it's Mocom

Our vision.

For over thirty years, safety, reliability and innovation have been the guiding principles behind all aspects of design and production at Mocom, the world's leading sterilization firm. The factors that set us apart, in terms of both skill and innovation, are conscientious attention to the choice of materials, ground-breaking technology, enforcement of strict production/quality control protocols and the wealth of experience accumulated by our qualified, specialised sterilization system designers. Mocom, sterilization first.

Making Your Life Better.

The Perfect Addition To Any Dental Practice

M7 - Precise adjustments and maximum comfort

The new M7 stool interacts smoothly with the anatomy of the body, making the dentist's work easier by aiding proper posture at all times. High-quality materials and innovative design ensure treatment is always performed under optimal conditions. Its dimensions match the spaces available in a surgery, yet also leave full freedom of movement. A comfortable seat - made of soft, easily sanitized material - helps dentists maintain proper positioning of legs and back during treatment.

Backrest

The backrest has been carefully sized to provide adequate lumbar support and minimise contact-generated heat.

Lumbar support

Independent adjustment of backrest height provides proper support for all dentists, whatever their build.

Tilt

The tilt angle can be adjusted to adapt the backrest to the dentist's own operating style and help decompress the spine when treatment is not being carried out.

Height adjustment

The M7 stool has an extensive height range, with independent adjustment of seat and back. A 10 cm extension is available to raise the seat further if required.

M9 - The shape of wellbeing

The M9 stool is the last word in ergonomics. Thanks to revolutionary saddle-like geometry, the M9 combines a very small footprint with unmatched comfort. The vertical, open position of the legs makes it easier to approach the patient and maintain proper back posture. This reduces fatigue, even during prolonged treatment sessions.

Beneficial effects

Careful shaping ensures bodyweight is distributed optimally over the seat. This results in a more natural, relaxed working posture that keeps concentration and energy levels high.

Freedom of movement

A tilt mechanism ensures the 'saddle' supports the dentist's body movements. This dynamic seating solution favours a proper, active posture in every treatment scenario. The angle of movement is easily adjusted and can be locked in place.

Upholstery

Two M9 versions are available: with seamless upholstery for easier cleaning and with Memory Foam padding (optional), which offers exceptional comfort.

Optimal height

A special adjustment mechanism means the seat can easily be adapted to users of any height. The model includes optional accessories such as a 10 cm extension and/or footrest ring.

M8 - Comfort and freedom of movement

The M8 stool offers perfect support, even during long treatment sessions, while allowing full freedom of movement in every direction. Adjustment and personalisation mechanisms streamline adaptation to the surgery layout and enhance operator efficiency.

The stool that streamlines workflows

Rotating armrest and circular seat

The fully independent armrest can be rotated 360°. The seat is comfortable in any position.

Stability and practicality

The shaped armrest is horizontal and has no edges, providing better forearm support. Made of non-slip material that optimises grip, it is perfect for prolonged use.

Personalised support

During assembly the armrest can be positioned with a centred coupling, or off-centre to the right or left (to allow for prevalent use on one side or the other). Furthermore, the support can be adjusted at any time by rotating the armrest around the operator to the desired position.
